Several months of eye pressure control
1 dissolvable implant

Welcome to

DURYSTA™
(bimatoprost implant) 10 mcg
For intracameral administration

Person pictured here is not an actual DURYSTA™ patient.

Approved Uses
DURYSTA™ (bimatoprost implant) is a prescription medicine to reduce eye pressure (also called intraocular pressure, or IOP) in patients with open angle glaucoma or high eye pressure (ocular hypertension).

Important Safety Information
DURYSTA™ should not be used if:
• You have any infection or suspected infection in your eye or surrounding eye area
• You have corneal endothelial cell dystrophy, a condition in which the clear front layer of your eye (cornea) has lost its ability to work normally and can cause vision problems

Understanding the role of eye pressure in glaucoma

Consistent eye pressure control is important

The pressure inside your eye is called intraocular pressure, or IOP. When IOP is elevated, it’s a major risk factor for vision loss associated with glaucoma over time. The higher the level of IOP, the greater the chance of optic nerve damage and vision loss.

1. Fluid builds up inside your eye and pressure increases

2. As pressure increases, it can damage your optic nerve (which connects your eye to your brain)

3. Over time, this damage to the optic nerve can lead to vision loss

Important Safety Information (cont’d)

DURYSTA™ should not be used if: (cont’d)

- You have had a corneal transplant or cells transplanted to the inner layer of the cornea (endothelial cell transplant)
- The sack that surrounds the lens of your eye (posterior lens capsule) is missing or torn
- You are allergic to any of its ingredients

DURYSTA™ helps to lower eye pressure in patients with open angle glaucoma or high eye pressure (ocular hypertension)

• DURYSTA™ is a tiny, dissolvable implant your eye doctor places in your eye
• As DURYSTA™ dissolves, it automatically releases medicine to help reduce high pressure inside your eye

Important Safety Information (cont’d)

DURYSTA™ may cause side effects involving the cornea, including increased risk of loss of cells from the inner layer of the cornea. You should not receive DURYSTA™ more than once in each eye. DURYSTA™ should be used with caution if you have a limited reserve of the cells lining the inner layer of the cornea.

Just 1 DURYSTA™ implant works for several months

DURYSTA™ consistently delivers medicine to your eye to help reduce high eye pressure.

In clinical studies for DURYSTA™, eye pressure was reduced for 15 weeks.

The most common side effect involving the eyes reported in patients using DURYSTA™ was eye redness. Other common side effects reported were: feeling like something is in your eye, eye pain, being sensitive to light, a blood spot on the white of your eye, dry eye, eye irritation, increased eye pressure, a loss of cells on the inner layer of the cornea, blurry vision, inflammation of the iris, and headache.

Important Safety Information (cont’d)

DURYSTA™ should be used with caution if you have narrow or obstructed iridocorneal angles (the space where the iris, the colored part of the eye, and cornea meet).

DURYSTA™ may cause swelling of the macula, the center spot of the retina (back of the eye). DURYSTA™ should be used with caution if your eye does not have a lens, if you have an artificial lens and a torn posterior lens capsule, or if you have any risk factors for swelling of the macula.

Here’s what people are saying about DURYSTA™

“DURYSTA™ does the dosing for me.”
- Actual DURYSTA™ patient quote

“A single DURYSTA™ continuously controls my eye pressure for several months.”
- Actual DURYSTA™ patient quote

Person pictured here is not an actual DURYSTA™ patient.

DURYSTA™ may be right for you, too.

Ask your eye doctor about DURYSTA™

Important Safety Information (cont’d)
DURYSTA™ may cause inflammation inside the eye or make existing inflammation worse.
DURYSTA™ may cause increased brown coloring of the iris, which may be permanent.

Ask your eye doctor if you’re eligible to pay as little as $20 for a DURYSTA™ implant*

* $1000 maximum benefit per eye; patient out-of-pocket expense may vary. Offer not valid for patients enrolled in Medicare, Medicaid, a Medicare drug benefit plan, TRICARE, or other federal or state health programs (such as medical assistance programs). Other limitations may apply.

Important Safety Information (cont’d)

Eye injections have been associated with infections in the eye. It is important that you contact your doctor right away if you think you might be experiencing any side effects, including eye redness, sensitivity to light, eye pain, or a change in vision, after an injection. Your doctor should monitor you following DURYSTA™ administration.

The most common side effect involving the eyes reported in patients using DURYSTA™ was eye redness. Other common side effects reported were: feeling like something is in your eye, eye pain, being sensitive to light, a blood spot on the white of your eye, dry eye, eye irritation, increased eye pressure, a loss of cells on the inner layer of the cornea, blurry vision, inflammation of the iris, and headache.
